ANUCRO
TECHNOLOGIES

Built for precision adhesive assembly.

For teams developing and assembling medical devices, electronics, and other small components using light-curable adhesives.

EXACTA DUO AT A GLANCE

- Two independent operator stations
- Touchscreen recipe selection
- Timed dispensing with hold and anti-drip
- Adjustable UV-LED cure time and intensity
- Recipe-linked training videos
- Operation without compressed air

Have an assembly process in mind?

Let's talk about your application.

TECHNOLOGIES

EXACTA DUO

Dispense. Cure. Repeat.

Integrated adhesive dispensing and UV-LED curing.

Two independent stations. One coordinated platform.

Recipe control | No compressed air

THE WORKFLOW

Less bench chaos. More process control.

Adhesive assembly already has enough moving parts. Your equipment shouldn't add to the pile.

Exacta Duo brings controlled adhesive dispensing and UV-LED curing together in one compact, touchscreen-operated platform - with two independent stations built around the way your team works.

01 Two stations. Your workflow.

Run the same recipe on both stations or give each operator a different process. Independent dispensing and curing controls let two operators work concurrently from one shared system.

02 No compressed air.

Electromechanical, positive-displacement dispensing eliminates the need for a pneumatic supply. Set dispense duration, speed, hold, and anti-drip retract to suit your assembly process.

THE CONTROLS

Your process. Ready to recall.

03 Save the setup.

Save dispensing and curing settings in a recipe so operators can return to the intended setup without rebuilding it every time.

04 UV curing, integrated.

Control UV-LED exposure time and output intensity through the same interface used for dispensing. Bring both operations to the bench in one coordinated platform.

05 Instructions at the machine.

Assign training videos to recipes so operators can review the assembly procedure where the work happens. Keep process settings and visual guidance together.

Select the recipe. Follow the process.
Dispense. Cure. Repeat.
